ExtraFax
FOR MICROSOFT EXCHANGE

The Ultimate Fax Server for Microsoft Exchange

... Reliability, Availability, Functionality and Incomparable User Experience

ExtraFax for Exchange is a faxing solution seamlessly integrated with Microsoft Exchange and Outlook, allowing users to send and receive faxes directly from their Outlook e-mail client. ExtraFax is intuitively designed into Outlook to maximize productivity and ease of use – all while reducing costs associated with using traditional faxing. Completely scalable to meet the faxing needs from SMB to global enterprises, our product quality and support are attested by our broad and prestigious customer base.

Features

Fax-over-IP (FoIP) support
ExtraFax allows you to leverage your existing VoIP infrastructure with its FoIP features.

Ease of Use
Sending a fax is as easy as sending an e-mail from your Outlook. Anything that can be printed in Windows can be faxed.

Inbound Routing
Deliver inbound faxes via CSID, IVR, DID/DTMF, Caller ID, PORT level or bar code based routing. ExtraFax can generate and recognize QR bar codes, and 3 of 9 bar codes. Bar codes can be incorporated into an organization's standardized forms to be used for automatic inbound routing purposes.

QR code

Active Directory Integration
ExtraFax is tightly integrated with Active Directory. There is no need to maintain separate set of user IDs and passwords. Existing fax numbers in Active Directory can be used for inbound routing.

Support for Office 365 with Exchange Online
On-premises ExtraFax server works with Exchange Online to send and receive faxes through outlook mailboxes for your Office 365 users.

Clustering, fail-over and load balancing
By supporting clustering, fail-over and load balancing, ExtraFax is able to ensure high availability and scalability of faxing services.

Cover Page Wizard
Create cover pages seamlessly, where end users and administrators can also preview the available ExtraFax cover pages before they are used.

Safeguard confidential documents
Restrict access for users and/or fax administrators to only see the cover page of a fax, ensuring the contents of the fax remain private and confidential. For heightened security, route inbound faxes directly to individual inboxes using DID routing.

OCR Support
Searching large documents for a small piece of information can be tedious and time consuming. With OCR, users have the ability to quickly search faxes saved in searchable PDF format for pertinent information, saving time and increasing productivity.

Native Printing
Native printing ensures quality conversions of file attachments into a fax format so that the way the attachment is viewed in its native application is how the document will appear when faxed.

Web Browser Based Administration
All configurations, user preferences, cover pages, logs and fax queues are all centrally managed from easy to use web browser based administration.

3 of 9 barcode generator
In addition to being able to create QR Codes, now you can create 3 of 9 bar codes directly within ExtraFax, so that they can be used with your fax documents.
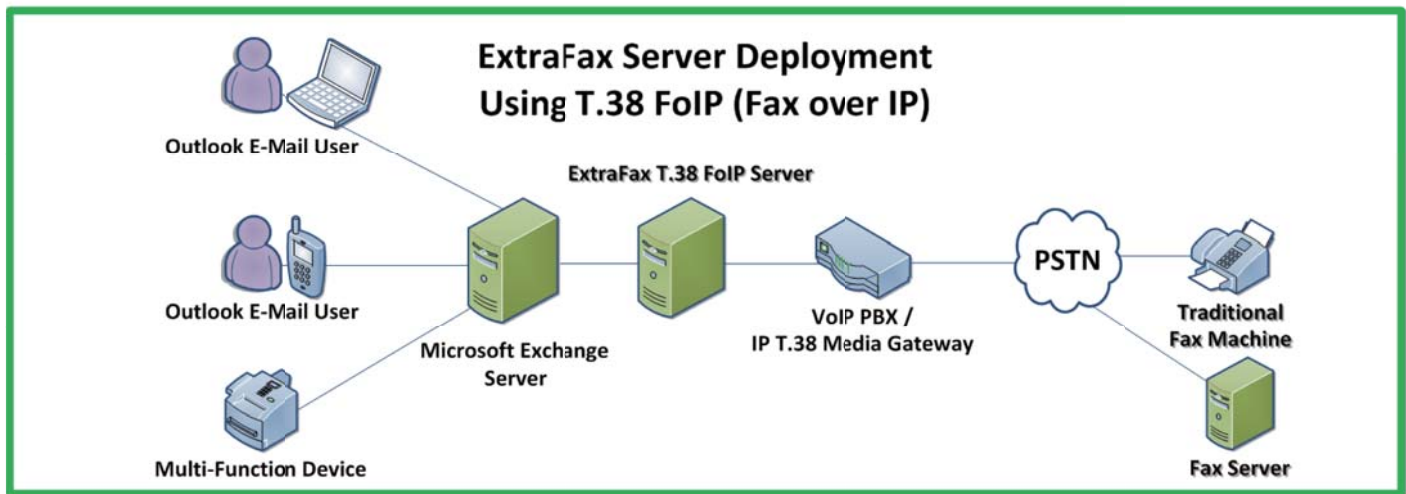

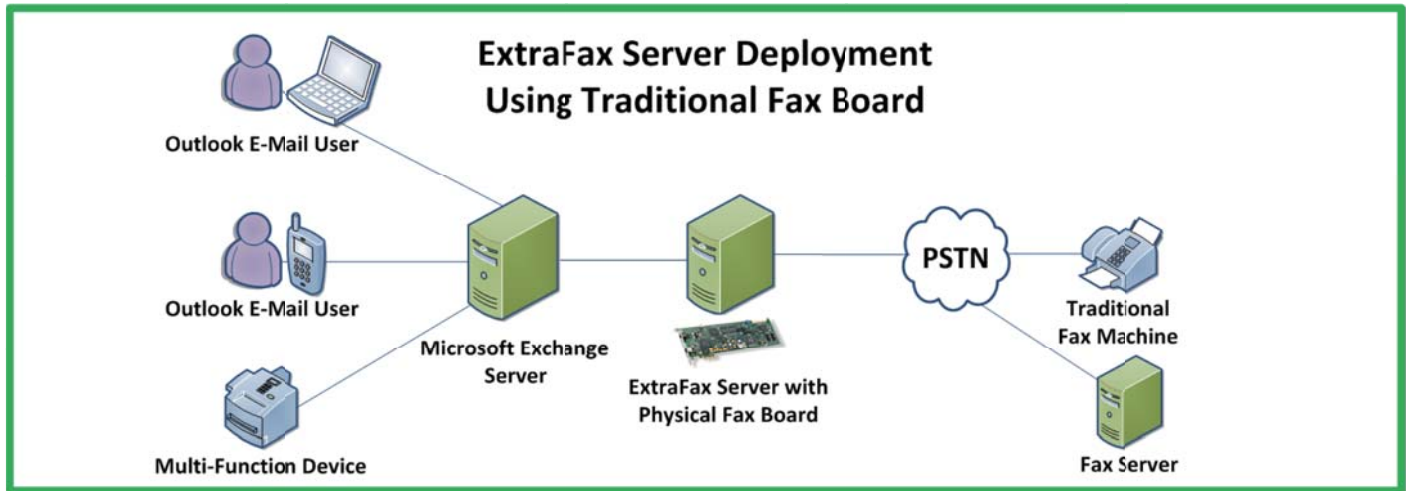

Support for Windows 2012
Natively install and run ExtraFax on Windows 2012.
